

## City Network launches in Poland

City Network has a long tradition of delivering high quality hosting in Scandinavia. Today City Network takes a step out in Europe by launching a complete set of hosting services in Poland with a new Polish team. Services that will be provided are for instance domain sales, shared hosting, cloud computing and dedicated environments.

Strategically City Network will continue on the same path with extremely attractive prices on domain names and its advanced hosting package. City Network will reach the enterprise side of Polish businesses via its cloud computing offering as well as dedicated environments.

Michal Gledala is responsible for the launch and for City Networks future business in Poland. Michal has been engaged in online businesses for almost a decade. His prior responsibilities include business development as branching out in new markets for various successful online companies.

- We have worked very hard the last few months to prepare for this launch. We enter Poland with a great offer from start and we are also the cheapest registrar for the top level domain .PL. The combination will make us a very attractive in Poland. Cloud computing is still in its infancy in Poland and we feel the timing for our enterprise and cloud offerings in Poland is perfect. Poland is a great market and we hope to be one of the top ten suppliers over the next 18 months, says Michal Gledala whom is responsible for Poland for City Network.
- It is fantastic for us to take the big leap into other European markets. We know there is a huge potential for us to become one of the truly leading European players. Poland is especially interesting as we are both close and have great communications from southern Sweden where we are head quartered. In general our services hold a higher standard than our competitors and we think that will be the difference that makes us more competitive in Poland, says chairman, Johan Christenson.

The top level domain .PL has just over 2 million domains. City Network is available from the main site of [www.citynetwork.pl](http://www.citynetwork.pl) and the cloud computing offering is found at - [www.citycloud.pl](http://www.citycloud.pl) using the brand City Cloud.
